Northeastern University

360 Huntington Ave,

Boston, MA 02115

To Whom It May Concern,

I am interested in the Data Analyst - Educational Innovation position at Northeastern University. I am a recent graduate with a Masters's degree in Applied Data Analytics from Boston University. I am excited to find this role aligns with my area of interest in natural language processing and its application in research. I am looking forward to utilizing my data analysis skill to help improve the development of data analytics related to Educational Innovation at Northeastern University.

I have worked on personal data analysis projects using Python and R programming languages. I have utilized Python's Scikit Learn library to deploy models such as logistic regression, random forest, and linear regression on a dataset for classification. Moreover, while I worked as a mechanical engineer, I developed great attention to detail which allows me to focus and locate patterns in datasets using statistical knowledge and coding.

I believe I have the skills and experience that you are looking for in a candidate. I am a quick learner and always find new ways to enhance my skills. I am also a team player who is willing to help out my teammates in need. I am confident that I can be a valuable asset to your team.

If you are interested in learning more about my skills and experience, please do not hesitate to contact me. I would be happy to discuss my qualifications further with you. Thank you for your time and consideration.

Sincerely,

Hubert Ooi
